PROFESSIONAL SUMMARY

Software developer specializing in Python backends and computer vision. Builds and deploys YOLO and OpenCV detection pipelines for industrial inspection, and designs REST APIs, database schemas, and access controls for platforms with real users. Led a four-engineer backend team on a platform that supported a live examination with 100+ students.

TECHNICAL SKILLS

Core competencies: Backend Development, REST API Design, Computer Vision, Object Detection, Model Deployment, Database Design, Technical Leadership

Languages & backend: Python, JavaScript, SQL, Flask, FastAPI, Django, Node.js, Express, REST APIs, JWT

Vision & data: YOLO, OpenCV, PyTorch, PostgreSQL, MySQL, SQLite, MongoDB, Supabase

Tools: Git, Docker, Linux, Azure DevOps, CI/CD, Postman, Beautiful Soup, Selenium

PROFESSIONAL EXPERIENCE

Software Developer | Microble Technologies | Apr 2026–Present

- Develop machine-vision systems for industrial inspection, including insulator defect detection.
- Own training data end to end: image collection, annotation, and augmentation for YOLO models.
- Train, evaluate, and deploy vision models into production inspection workflows using OpenCV.

Python Developer | Empire Circuits LLC | Sep 2025–Apr 2026

- Built PondGuard's bird-detection software with event capture and automated deterrent responses.
- Built an OpenCV image-stitching pipeline for PCB quality inspection.
- Built real-time monitoring dashboards with ThingsBoard, Grafana, and MQTT.

Python Developer | Infotact Solution | Apr 2025–Jul 2025

- Developed Droplify, an e-commerce price-tracking application, on Flask and SQLite.
- Added Beautiful Soup and Selenium data collection, analytics dashboards, and price-drop alerts.

Backend Developer & Team Lead | CHARUSAT University | Jun 2024–Aug 2024

- Led a four-engineer backend team on Placestar, supporting a live examination with 100+ students.
- Designed Node.js/Express REST APIs, MySQL schemas, JWT auth, and role-based access controls.
- Coordinated sprint planning, code reviews, and backend optimization.

PROJECTS

PondGuard | Python · Flask · YOLO11

Owned bird-detection software with event capture and automated sprinkler and red-beam deterrents.

Placestar | Node.js · Express · MySQL

Built placement/exam APIs with Wi-Fi restrictions and single-session controls; supported 100+ students.

Droplify | Flask · SQLite · Selenium

Solo-built four-platform price tracking, analytics, and email alerts; validated 25+ product pages.

AMC Connect | FastAPI · PyTorch · YOLO

Built civic-complaint APIs, GPS validation, image screening, and LLM-generated descriptions.

ClubSphere | Node.js · PostgreSQL · JWT

Led club-management APIs, database design, and authentication; piloted at CHARUSAT University.

Worker Location Management | ThingsBoard · Geofencing

Configured zone/inactivity rules and alerts; validated monitoring behavior using RSSI signal data.

EDUCATION

B.E. in Computer Engineering | 2023–2026

CHARUSAT University, Anand | CGPA: 9.07/10

Diploma in Computer Engineering | 2020–2023

A.V. Parekh Technical Institute, Rajkot | CGPA: 9.89/10 · Top 10 Merit Award

AWARDS & RECOGNITION

Top 10 Merit Award, Diploma in Computer Engineering (A.V. Parekh Institute) | Indus Hackathon 2025 participant
